

Do you obsess
over food? Your
weight?
Dieting?

Research Participants Needed Eating Disorder Treatment Study

Our research team at the Cornell College Eating Disorder Institute is conducting an eating disorder treatment study. We are recruiting 180 women with symptoms of disordered eating between the ages of 15-35. Symptoms may include excessive worry about food or weight, dieting, body dissatisfaction, maladaptive exercise, or binge or purge behaviors. If you have these symptoms, you may be eligible for our study. If you know others who may be interested, please share this information with them.

Participants eligible for the study will receive free eating disorder assessments, treatment referrals, and free treatment (if assigned to a treatment group). Participants will also be compensated for participating. We have treatment sites in Mt. Vernon, IA and in Coralville, IA.

For additional details contact Dr. Melinda Green at mgreen@cornellcollege.edu.
